DİJİTAL OYUN PROJESİ 3

PROJECT: NIGHTWATCH

Birinci şahıs korku ve dedüksiyon oyunu

First-person horror & deduction

WEEK 05

Core Loop & Game Feel

Phase 11 - System Integration: COMPLETE

CURRENT SCENE STUDY

Security booth blockout - early environment pass

Nazım - Technical Development

Ramtin - Art & Modeling

Unity 6000.5.9f1 / Blender / GitHub / Notion / VS Code

A shift built on doubt

Oyuncu yalnızca belgeleri kontrol etmez; karar verirken zamanını, ekipmanını ve fiziksel güvenliğini de yönetir.

PLAYER FANTASY

Gizli bir laboratuvarda gece vardiyasında çalışan düşük rütbeli bir güvenlik görevlisi olmak.

Personelin kimliğini doğrula, şüpheli davranışları değerlendir ve tesis içinde ortaya çıkan acil görevlerle ilgilen. Güvenlik noktasından ayrılmak yeni bir risk yaratır.

CORE TENSION

Doğru kişiyi belirlemek için yeterli kanıtın var mı - ve bunu yaparken kendini güvende tutabilecek misin?

THREE DESIGN PILLARS

01

Bilgi & dedüksiyon

Kimlik bilgileri, önceki konuşmalar ve UV izleri tek başına aynı türde kanıt değildir.

02

Zaman & kaynak yönetimi

Kontrol noktası ile tesis görevleri arasında öncelik belirle; sınırlı envanteri yönet.

03

Fiziksel risk

Kapı açıkken yaratıklar sızabilir; tesis içindeki karşılaşmalar güvenliği doğrudan etkiler.

Genre: First-person Horror · Deduction · Job Simulation

The night-shift loop

Temel döngü, bilgi toplama ile fiziksel görevleri aynı vardiya içinde birbirine bağlar.

EVIDENCE SOURCES

Identity records / Remembered conversation / UV-reactive traces

Success depends on decisions, not one automatic scanner.

Phase 11 - System Integration

Completed milestone: individual gameplay systems are connected inside the Sandbox workflow.

MILESTONE STATUS

PHASE 11 COMPLETE - system integration is the current confirmed production milestone.

01

Task trigger

Generator failure or feeding task

02

Leave booth

Player commits time and inventory

03

Door risk

Open door can allow infiltration

04

Encounter

Creature may attack or ambush

05

Checkpoint

Return to identity / UV decision

WHAT THIS PHASE PROVES

The systems no longer exist only as isolated mechanics. Their dependencies and player-facing consequences can be exercised together.

SCOPE NOTE

Integration complete does not mean final polish or content complete. The next step is to move the validated gameplay flow into the main game scene.

A retro workstation takes shape

Model ve prop görüntüleri mevcut sanat üretiminin erken aşamasını gösterir; final materyal ve ışıklandırma iddiası taşımaz.

CRT MONITOR

Main information point

WIP model - shape, scale and material response can still change.

KEYBOARD

Desk interaction prop

WIP model - shape, scale and material response can still change.

MOUSE

Workstation detail

WIP model - shape, scale and material response can still change.

PC TOWER

Retro hardware silhouette

WIP model - shape, scale and material response can still change.

LOW-POLY / RETRO HARDWARE

Art & modeling: Ramtin

Security booth - blockout and props

İlk çevre geçişi; mekân, masa, kapı ve güvenlik odasındaki temel referans nesneleri bir araya getiriyor.

WORKSTATION

METAL DOOR

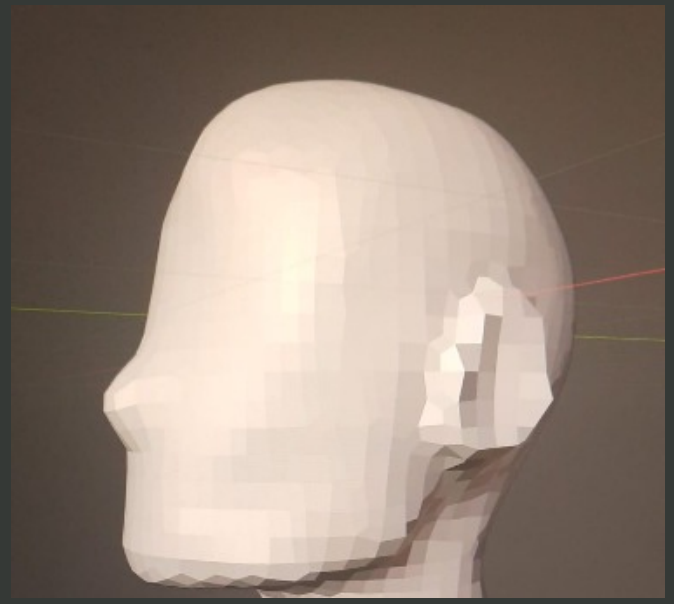

WALL CLOCK

ROOM SCALE

Current goal: clear layout and readable interaction space before final visual polish.

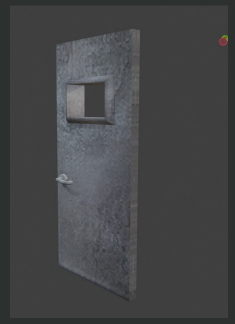

Props and character base-mesh exploration

Mevcut model seti, tesisin çalışma alanından temel karakter geometrisine kadar farklı varlık türlerini kapsıyor.

CHARACTER BASE MESH

Early head blockout. Not presented as a final character or creature model.

METAL DOOR

A recognizable facility prop and an important physical boundary in the level.

WALL CLOCK

A visual time reference for a setting built around a long night shift.

Art direction remains in progress; these images document current modeling, not a locked art bible.

Current gameplay systems

Reported as working in the current prototype / Sandbox; individual features may still need balancing, polish and broader QA.

01 **FPS player movement**

Movement and interaction foundation

02 **NPC + identity check**

Personnel inspection flow

03 **Scientist memory**

Conversation consistency check

04 **UV detector**

Evidence visibility for Skinwalker cases

05 **Facility task**

Feeding or generator task flow

06 **Creature encounter**

Attack / ambush behavior

07 **Shift schedule**

Daily flow and shift timing

08 **Sandbox debug tools**

Fast setup for repeatable test cases

Current milestone: integrated system flow in Sandbox. Still ahead: main-scene content, balancing, usability checks and polish.

Core Loop & Game Feel

Bu haftanın hedefi yalnızca daha fazla mekanik eklemek değil; oyuncunun yaptığı eylemleri anlaşılır ve tutarlı hale getirmek.

CORE LOOP BUILD

A short, repeatable playable sequence should connect:

1. Review the shift information
2. Inspect a person and gather evidence
3. Make a consequential decision
4. Handle one facility task or threat
5. Return to the checkpoint and continue

GAME FEEL CHECKLIST

01 Readability

Can the player understand what can be interacted with?

02 Feedback

Do actions communicate success, failure or danger?

03 Control

Do movement, looking and interaction feel predictable?

04 Pacing

Can the shift alternate inspection and physical tasks without confusion?

These are the next evaluation targets, not a claim that final game feel or user testing is complete.

From integration to vertical slice

Phase 11 is complete. Production now moves from integrated Sandbox systems toward the main game scene and a focused, testable vertical slice.

DONE

Phase 11

System integration in Sandbox

NEXT

Phase 12

Main game construction

AFTER

Phase 13

Campaign, progression and ending

LATER

Phase 14

Balance, QA and polish

DELIVERY TARGETS

10-30 min

Course deliverable: a focused vertical slice with a clear core loop.

3-4 hours

Longer-term demo ambition, not the minimum course deliverable.

TEAM & TOOLCHAIN

Nazım - Technical development
Ramtin - Art & modeling

Unity 6000.5.9f1 / Blender / GitHub / Notion / VS Code

Next proof point: one short gameplay session that ties identity deduction, facility pressure and physical risk together - then verify it with a playable build.
